--- Sample Guyton Hall Physiology MCQ with Explanation

Question: Which of the following factors primarily determines the stroke volume of the heart?

A) Heart rate
B) Venous return
C) Systemic vascular resistance
D) Coronary blood flow

Answer: B) Venous return

Explanation: Stroke volume (SV) is primarily determined by the volume of blood returning to the heart, known as venous return, which influences preload according to Frank-Starling's law. Increased venous return stretches the cardiac muscle fibers, leading to a more forceful contraction and increased stroke

volume. Heart rate influences cardiac output but not stroke volume directly. Systemic vascular resistance affects afterload, which can influence stroke volume but is not the primary determinant. Coronary blood flow supplies the myocardium but does not directly determine stroke volume. --- Conclusion: The Value of Guyton Hall MCQs for Continuous Learning Mastering physiology through MCQs based on Guyton and Hall's textbook is an essential step in medical education.
